## PEDIEOS CLEAN-UP CAMPAIGN

The Pedieos River, the longest river in Cyprus with a length of 98 km, springing from Troodos Mountains, near the Macheras Monastery, crossing the plain of Mesaoria and flowing into the gulf of Famagusta, acting together with air and soil as a distributor of waste pollution, especially plastic waste.

**EcoLOG informal and engaging training of ecologically responsible citizens.**

QR code cards will be set in positions across the river banks, as part of EcoLOG location sensitive game.

<https://www.eco-responsible.training>

**Plastic Origins is a citizen science project developed to map river plastic pollution in Europe.**

During the clean-up we will attempt to collect information and images on plastic pollution with the Plastic Origins app.
